Computer Science and Computer Engineering

@usmartsandsciences

Post-secondary students in the State of Mississippi often choose to attend a Mississippi community college (MS CC) and earn an associate degree before transferring to The University of Southern Mississippi. To ensure no credits are lost, we have created this transfer guide. In most, but not all, cases, students may complete a bachelor's degree in what we refer to as a '2+2' format:

$$2 \text{ years at a MS CC for an associate degree, which includes general education courses} + 2 \text{ years at USM to complete the bachelor's degree}$$

Please use the key below to determine which courses you must, should, or could take at a Mississippi community college before transferring to Southern Miss.

KEY

<p>MUST</p>	<p>Students must complete these requirements and those who cannot complete their bachelor's degree in the 2+2 format.</p>
<p>SHOULD</p>	<p>Students should complete these requirements in order to have the smoothest transition to Southern Miss. It may still be possible to complete a bachelor's degree in the 2+2 format without taking these courses, but it will be challenging.</p>
<p>COULD</p>	<p>Students could complete these requirements if they desire. Not taking these courses prior to transfer will not affect a student's ability to complete their bachelor's degree in the 2+2 format.</p>
<p>PREREQUISITE READINESS</p>	<p>Calculus is required on this degree plan. Students should arrive at Southern Mississippi ready to take Calculus I, which means they must have completed Trigonometry or have a Math ACT subscore ≥ 27. Students may complete Calculus I prior to transferring if they desire.</p>

NOTE: This document is intended as a guide; it does not guarantee graduation in the 2+2 format. Degree requirements can change. Please consult the school of your desired major for the most current requirements.

Additional majors are available from the other Southern Miss colleges.

COMPUTER ENGINEERING

PROGRAM INFO

Computer engineering encompasses all aspects of designing, building, and programming computer systems. It combines fundamentals of computer science and electrical engineering in one field. This program introduces students to both hardware (data electronics, circuits) and software (programming) of computer systems. This degree program prepares graduates for successful, profitable, and lifelong careers in computer systems design, mobile and embedded computing devices, sensor networks, reconfigurable logic, software engineering, cybersecurity, Internet of Things, and machine intelligence applications.

RESEARCH OPPORTISM

Students can participate in research projects in cyber-physical systems, robotics, embedded systems, reconfigurable computing, computer vision, data analytics, robotics, informatics, cybersecurity, cloud computing, and other areas.

There are program-specific research opportunities available each year. Students should apply through the "Gold Opportunities" GO System.

CAREER OUTLOOK

Graduates of this program pursue job opportunities with various industries, government agencies, and business employers in Mississippi and throughout the region. Common industries include technology, manufacturing, finance, and healthcare. Potential positions are software developer, hardware engineer, network engineer, systems analyst, embedded systems engineer, robotics engineer, data scientist, project manager, technical sales engineer, and more.

KNOWLEDGE & SKILLS

Students take courses in

- Computer systems and networks
- Digital and analog electronics
- Wireless and network security
- Data structures
- Cyber law and ethics
- And more

The degree culminates in a senior design project in the student's area of interest.

COMPUTER ENGINEERING B.S.

(Page 1/2)

NOTE This degree plan cannot be completed in the 2+2 format due to prerequisite availability of the courses. Therefore, students should expect to still take four years at Southern Miss to complete their degree after transferring.

COMPUTER SCIENCE

COMPUTER SCIENCE, APPLIED COMPUTER SCIENCE

PROGRAM INFO

Computer science students learn to analyze a problem then identify and define the computer requirements appropriate to its solution. This program provides career-oriented computing education that enables graduates to enter industry and government. Students select concentrations in specific content areas to match their interests and career goals.

CAREER OUTLOOK

The career outlook for computer science majors is bright. It continues to grow. With the increasing importance of technology in business and industry, our graduates are well-positioned to pursue a variety of exciting and lucrative career paths.

Some of the most popular career paths among computer science majors are software development, data science and analytics, cybersecurity, network engineering, artificial intelligence and machine learning, and database administration. Graduates of the program work in a range of industries, including technology, finance, health, and entertainment.

According to the Bureau of Labor Statistics, employment of computer and information technology occupations is projected to grow 15% from 2021 to 2031, much faster than the average for all occupations. This growth is driven by an increased emphasis on computing, big data, and mobile computing, as well as other technologies.

RESEARCH AT USM

Computer science faculty members are actively engaged in research and scholarly activities, and eagerly participate in service to the school, college, university, community, and to their profession. Students participate in research areas including AI, machine learning, robotics, bioinformatics, virtual reality, and cybersecurity.

SCHOLARSHIPS

Students should apply through the "Golden Opportunities" GO System.

KNOWLEDGE & SKILLS

Computer science majors learn:

- Programming languages
- Data structures and algorithms
- Computer architecture and operating systems
- Networking and security
- Database
- AI and machine learning
- Project management
- Critical thinking
- Problem solving
- Communication

CYBERSECURITY

PROGRAM INFO

The Bachelor of Applied Science degree in Cybersecurity provides the opportunity to transfer up to 60 hours of technical credit to a 4-year degree program in a growing technical field. Students will gain skills through coursework offered across computer science and information technology programs that prepare them for cybersecurity defense, risk assessment, and countermeasures designed to protect against cyber threats.

CAREER OUTLOOK

With a cybersecurity degree, graduates can pursue a variety of career paths. Common job titles include cybersecurity analyst, security consultant, penetration tester, cybersecurity engineer, information security manager, and cybersecurity educator.

RESEARCH ASSISTANT

Students will work with faculty to gain hands-on experience in the ever-evolving computing and cybersecurity fields and to gain the skills necessary to succeed in a wide range of professional domains. Our faculty consists of researchers known nationally for their innovative work and professionals with real-world experience.

KNOWLEDGE & SKILLS

- Network security: identify, secure networks, identify vulnerabilities, and implement security controls.
- Cyber threat intelligence: monitor and analyze cyber threats and develop strategies to prevent them.
- Cryptography: encryption, decryption, digital signatures, and other techniques for securing data and communications.
- Cybersecurity laws and policies: legal and regulatory frameworks related to cybersecurity, including data protection and privacy laws.
- Incident response: respond to cyber incidents, including detecting, containing, and mitigating the effects of a breach.
- Risk management: identify and manage cybersecurity risks, including assessment, mitigation, and controls.
- Ethical hacking: conduct penetration testing, vulnerability assessments, and other techniques to identify and exploit weaknesses in systems.
- Cybersecurity strategy and management: develop and implement cybersecurity strategies and

PROGRAM INFO

We prepare our students to become network administrators and information systems.

The program includes courses such as:

- Local and wide-area networking
- Network security
- Network management
- Network design
- Application development
- Virtualization technologies

RESEARCH AT USM

Our faculty are actively involved in research in artificial intelligence, broadening participation in computing, and research at the undergraduate and

CAREER OUTLOOK

According to the Bureau of Labor Statistics the median annual wage for network administrators is more than double that of the median for all workers. The BLS is also projecting job growth for occupations over the next ten years, much faster than the average for all occupations.

Graduates of this program find employment as systems administrators, network administrators, and in other technology-related fields.

The IT program is part of the Cisco Networking Academy and offers CCNA and IT Foundations courses, which can lead to industry certification.

The School of Computing and Engineering is a CompTIA academic partner.

SCHOLARSHIPS

There are dozens of program-specific scholarships available each year. Students should apply through the Golden Opportunities Go System.

KNOWLEDGE & SKILLS

The program provides access to Microsoft and VMware software via annual subscriptions, security training through Fortinet Academy on the latest firewall technologies. The academies and other resources allow IT students to achieve a mastery of the most current technologies.

IT graduates are skilled in:

- Network management
- Complex problem solving
- Analysis
- Project management
- Communication
- Teamwork
- Adaptability
